No. 19-1/2019-STD/TEC                                    Dated: 08.09.2020

**Subject: Adoption of TSDSI transposed 3GPP standards (same as Recommendations ITU R M.2012-4) as National Standards by TEC**

TSDSI, as an organizational partner of 3GPP has transposed 3GPP standards[1] (same as Recommendations ITU-R M.2012-4[2]) totalling 402 in numbers and had provided to TEC for adoption as national standards by TEC. These radio interface standards detail the features and parameters of IMT-Advanced like compatibility, international roaming, and access to high-speed data services.

These standards have been processed for adoption as per the "Standardization Guide – A policy document for adoption of the domestic/international standards into national standards" notified as per O.M. No. 2-1/2018/SD/TSDSI/TEC/5 dated 8th May 2020. These standards were initially circulated to all the stake holders for the public consultation. Then, a Consultative Committee (CC) on 3GPP under chairmanship of DDG (MT), TEC and other members from industry, academia, government, R&D organizations, SDOs etc. have examined the standards w.r.t. public comments and inclusion of national requirements. Subsequently, Telecom Standards Advisory Committee (TSAC) has recommended adoption of these standards as identical adoption (as per ISO/IEC Guide 21-1). The competent authority has approved adoption of these TSDSI transposed 3GPP standards (402 Nos.) into national standards.

Mobile Technologies (MT) division of TEC is requested to take further necessary action for allocation of number, publication, presentation etc. of these standards as per the Standardization Guide in consultation with Regional Coordination (RC) division.

This has approval of Sr. DDG, TEC.
